Agustín Tabarcache

AI Software Engineer | Full Stack Development | React · Next.js · NestJS · Node.js · Python | RAG · AI Agents

Buenos Aires, Argentina | +54 387 518 7957 | agustintabarcache74@gmail.com | linkedin.com/in/agustintabarcache | portfolio-agustin-tabarcache.vercel.app

Professional Profile

I am a freelance Full Stack Developer with more than 3 years of independent experience, built through referrals and direct recommendations from clients in Argentina's SME and technology sectors. In addition to end-to-end development with React, Next.js, Node.js, NestJS, PostgreSQL, and MongoDB, I apply generative Artificial Intelligence in practical, production-oriented scenarios: I integrate language model APIs (OpenAI, Anthropic Claude, DeepSeek, OpenRouter), implement RAG (Retrieval-Augmented Generation), embeddings, and vector search with pgvector, and structure my daily workflow around AI-assisted development tools (Claude Code, Codex). I combine this specialization in applied AI with effective technical communication, direct client interaction, autonomy in decision-making, and adaptability, supported by certified B2 English proficiency and sustained remote experience with the ability to work effectively with multicultural teams and clients.

Core Skills

RAG (Retrieval-Augmented Generation), embeddings and vector search (pgvector), LLM API integration (OpenAI, Anthropic Claude, DeepSeek, OpenRouter), Prompt Engineering, AI agent orchestration, AI-assisted development tools (Claude Code, Codex, Pi, OpenCode), React, Next.js, Node.js, Express, NestJS, TypeScript, JavaScript, Python, PostgreSQL, MongoDB, REST API design and implementation, JWT/OAuth/roles and permissions, third-party service integration (Zoom, CRM), testing (Jest, Vitest, Cypress, Playwright, Supertest), Docker, deployment on VPS/Vercel/Render/Railway, Git/GitHub, Figma. Technical autonomy, communication of technical concepts to non-technical audiences, direct client management, teamwork, active listening, and adaptability to remote and multicultural environments.

Professional Experience

AI Software Engineer (Freelance) | 03/2023 – Present | Buenos Aires, Argentina (remote/hybrid)

I have worked independently since 03/2023, building my career entirely through referrals and recommendations from previous clients. I provide full stack development, applied AI, process automation, and IT consulting services to 4 clients across Argentina's SME, technology, equipment/machinery, and education sectors, maintaining direct and ongoing relationships with each client.

- Integrated generative AI into a real production workflow: automated the generation of internal documentation through a language model API, reducing document generation time from ~20 minutes to ~20 seconds and eliminating manual steps.
- Applied RAG, embeddings, and vector search with pgvector, and integrated LLM APIs (OpenAI, Anthropic Claude, DeepSeek, OpenRouter) and AI agent orchestration into internal solutions, incorporating AI-assisted development tools (Claude Code, Codex) into my daily workflow.
- Developed and maintained more than 10 end-to-end systems, modules, and automation solutions, designing REST endpoints with Node.js, Express, and NestJS, and interfaces with React and Next.js integrated with PostgreSQL and MongoDB.
- Automated administrative and commercial processes through third-party integrations (Zoom API for managing more than 30 meeting recordings and automated billing documentation generation) and led the adoption of a CRM system (Kommo) and an employee tracking tool, gathering requirements and defining digitalization processes.
- Recovered, maintained, and modernized web applications and legacy VPS environments, restoring offline websites and unused databases, while independently making technical and architectural decisions.
- Developed internal business tools (vehicle price comparison, metrics dashboards, and billing documentation automation) using Python for backend development, data extraction, and processing, simplifying commercial workflows through the automation of repetitive tasks.
- Advised clients on end-to-end digitalization and technology optimization processes, combining development, technical support, and incident resolution in production environments.

Education

Universidad Tecnológica Nacional (UTN) — University Degree in Programming | 03/2024 – Present (third year)

Technical Education School No. 3117 — Computer Science Technician | 03/2012 – 12/2018

Certifications / Languages / Tools

- B2 English (Upper-Intermediate), certified by the British Council, 2026
- Data Science and AI Training — UTN, 2025
- Soft Skills Training (+80 hrs) — Fundación Pescar / Educación IT, 2025
- AI-assisted development tools: Claude Code, Codex, Pi, OpenCode
- Git, GitHub, Figma
